Environmental Policy

Leaffield Environmental has considered the impact on the environment of its activities and undertakes to minimise the environmental impact of its processes, products and services through its commitment to sustainability.

Our principle environmental commitments are:

- through the nature of our work, to undertake research, design, development, build and supply of products that will meet appropriate international and client requirements
- to promote the environmental agenda in business and the community through the marketing and sale of Leaffield's range of recycling, litter control and rainwater storage products
- to comply with all applicable legislation, codes of practice and regulatory controls
- to minimise practically avoidable pollution or nuisance that may be caused by our activities
- to use energy and natural resources efficiently and to reduce consumption where possible
- to minimise the generation of waste and to dispose of unavoidable waste in a responsible manner
- recycle 100% of process related waste back into its product range
- to consider the environmental implications of changes to products, processes, materials and facilities when business decisions are made
- to continually improve our environmental performance through the setting and review of realistic and achievable objectives and targets
- to provide appropriate resources for the implementation of this policy

This policy is implemented at Leaffield Environmental through our environmental management systems and changes to this policy shall be driven by audit results, changing circumstances and the commitment to continual improvement. Staff awareness of this policy is ensured by providing appropriate training.
